B1TDC: BloxOne™ Threat Defense Cloud

SECURITY – ESSENTIALS PRODUCT TRAINING	
Course Description	Learn how to configure BloxOne Threat Defense Cloud to proactively secure your enterprise network, remote offices, and roaming personnel against DNS-based data exfiltration and malware communication with external networks. Discover how to configure and administer your BloxOne Threat Defense Cloud deployment via the Cloud Services Portal. Learn how to forward DNS queries using Direct Forwarding, or by configuring a DNS Forwarding Proxy; configure and deploy the BloxOne Endpoint Client; configure and apply BloxOne Threat Defense Cloud Security Policies; leverage reporting to investigate security incidents; and research threats with Infoblox Dossier.
Target Audience	This On-Demand course is intended for Network Engineers, Network Operators, DNS Administrators, and Security Engineers managing network security using the Infoblox BloxOne Threat Defense Cloud solution.
Duration	4.5 hours
Learning Style	Lecture and demo
Available Modalities	On-Demand
Prerequisites	Attendees should have a working knowledge of DNS or have completed the DNS Fundamentals e-learning courses.
